Sommario/riassunto

Research on healthcare and social service including professional social work is inherently an international subject. Each nation has a story of coping with the recent pandemic in the context of its political economy and cultural-historical settings. A study of various (especially non-Western) cases is essential to an adequate understanding of the undertaking. China is undoubtedly an important case with one of the largest populations on earth. It's unique in view of so-called Chinese characteristics/style/model, sometimes fundamentally different from Western societies. Any lessons learned from the Chinese experiences would help with a better understanding of healthcare and social welfare provisions on a global scale. The book is written by a scholarly team who are experts in healthcare, social work, and related fields. Its primary audiences are scholars and students in Health/Mental Health, Social Work/Welfare/Services, Public/Social Policy, Philanthropy and Nonprofit Organizations, International/Cross-Cultural Studies, and Chinese/China research.
