Sommario/riassunto	This book by Alfred Lansburgh, published in 1924, explores the financial policies of the German Reichsbank during and after World War I. It examines the challenges faced by Germany in financing the war, particularly focusing on the monetary strategies employed to cover wartime expenses. The book delves into the debate over different methods of funding, such as foreign loans, domestic loans, and the use of short-term credit through the issuance of banknotes. Lansburgh discusses how these financial decisions were influenced by the political and economic contexts of the time, including the limitations imposed by international relations and internal economic conditions. The work is

intended for readers interested in economic history, monetary policy,
and the impact of war on national economies.
