Das Kaiserreich und die Rheinschifffahrt -- Coqueberts Beamten Instruktionen
Sommario/riassunto	This book, authored by Eberhard Gothein and published in 1903,

provides a comprehensive historical analysis of the shipping industry along Germany's major rivers in the 19th century. It focuses on the economic, political, and industrial transformations that influenced river navigation, highlighting significant events such as the formation of the Zollverein and the impact of various international treaties. The book examines the evolution of trade, transportation, and tariff systems, and their effects on regional and international commerce. Gothein utilizes extensive archival research, particularly from the Cologne Chamber of Commerce, to detail the socio-economic developments and political struggles surrounding river trade. This scholarly work is intended for historians, economists, and scholars interested in the history of commerce and industrialization in Germany.

Sommario/riassunto

Health promotion and disease prevention are central priorities in the Centers for Disease Control and Prevention (CDC) vision. To advance research in these areas, Congress authorized and CDC established a program of university-based Centers for Research and Demonstration of Health Promotion and Disease Prevention to explore improved ways of appraising health hazards and to serve as demonstration sites for new and innovative research in public health. Begun in 1986 with three centers, there are now fourteen. In response to a CDC request to evaluate the program, Linking Research and Public Health Practice examines the vision for the prevention research centers program, the projects conducted by the centers, and the management and oversight of the program. In conducting the evaluation, the IOM committee took a broad view of how prevention research can influence the health of communities, and considered both the proximal risk factors for disease prevention and the more distal conditions for health promotion and improved equity in the distribution of risk factors.
