Sommario/riassunto

By engaging with recent developments in the study of empires, this book examines how inhabitants of Roman imperial Syria reinvented expressions and experiences of Greek, Roman and Syrian identification. It demonstrates how the organization of Greek communities and a peer polity network extending citizenship to ethnic Syrians generated new semiotic frameworks for the performance of Greekness and Syrianness. Within these, Syria's inhabitants reoriented and interwove idioms of diverse cultural origins, including those from the Near East, to express Greek, Roman and Syrian identifications in innovative and complex ways. While exploring a vast array of written and material sources, the book thus posits that Greekness and Syrianness were constantly shifting and transforming categories, and it critiques many assumptions that govern how scholars of antiquity often conceive of Roman imperial Greek identity, ethnicity and culture in the Roman Near East, and processes of 'hybridity' or similar concepts.

Sommario/riassunto

This book, written by Wilhelm Lexis, examines the social and political dynamics of French trade unions in the late 19th century. It explores the development of workers' and employers' associations in France, highlighting their unique characteristics influenced by restrictive legislation and distinct social conditions. The work does not aim to provide a comprehensive history of French trade unions but rather to analyze them as social experiments with potential broader implications. Lexis discusses various laws affecting these unions, their organizational structures, and their roles in representing industrial interests. The study is intended for scholars and readers interested in social politics and the evolution of labor movements in France.
