Sommario/riassunto	This book, part of a series by the Verein für Socialpolitik, examines the expansion of municipal activities in France and England. It explores the development of municipal socialism and the legal and social challenges faced by communal industries. The text discusses the political nature of municipal institutions in France, highlighting the role of democratic recruitment and political motivations in local governance. It argues that municipal councils often lack the necessary skills for managing

industrial enterprises, leading to inefficiencies. The book also addresses the legal constraints and capacities of municipalities in creating and managing industrial services, emphasizing the importance of adhering to public law principles. The work is intended for scholars and professionals interested in public policy, municipal governance, and social economics.
