Sommario/riassunto

This book by Kofi Kissi Dompere explores the theories of knowing and knowledge production within the context of systems, decision making, and control. The work aims to organize spaces of functors and categorial converters, shedding light on the interplay between economic production and consumption processes under the overarching framework of dualities. It addresses the complexities of systems and the methodologies that integrate engineering, computer science, physics, economics, and social sciences. The author delves into the human conditions of curiosity, creativity, and innovation, and their impact on understanding processes and technologies. The book is intended for scholars, researchers, and professionals interested in advancements in systems theory and its applications across various domains.
