## Sommario/riassunto

In Signposts , Sally E. Hadden and Patricia Hagler Minter have assembled seventeen essays, by both established and rising scholars, that showcase new directions in southern legal history across a wide range of topics, time periods, and locales. The essays will inspire today's scholars to dig even more deeply into the southern legal heritage, in much the same way that David Bodenhamer and James Ely's seminal 1984 work, Ambivalent Legacy , inspired an earlier generation to take up the study of southern legal history. Contributors to Signposts explore a wide range of subjects related to southern

## Sommario/riassunto

Design and Development of Medical Electronic Instrumentation fills a gap in the existing medical electronic devices literature by providing background and examples of how medical instrumentation is actually designed and tested. The book includes practical examples and projects, including working schematics, ranging in difficulty from simple biopotential amplifiers to computer-controlled defibrillators. Covering every stage of the development process, the book provides complete coverage of the practical aspects of amplifying, processing, simulating and evoking biopotentials. In addition, two ch
