Sommario/riassunto	Studies of Japanese syntax have played a central role in the long history of Japanese linguistics spanning more than 250 years in Japan and abroad. More recently, Japanese has been among the languages most intensely studied within modern linguistic theories such as Generative Grammar and Cognitive/Functional Linguistics over the past fifty years. This volume presents a comprehensive survey of Japanese syntax from

these three research strands, namely studies based on the traditional research methods developed in Japan, those from broader functional perspectives, and those couched in the generative linguistics framework. The twenty-four studies contained in this volume are characterized by a detailed analysis of a grammatical phenomenon with broader implications to general linguistics, making the volume attractive to both specialists of Japanese and those interested in learning about the impact of Japanese syntax to the general study of language. Each chapter is authored by a leading authority on the topic. Broad issues covered include sentence types (declarative, imperative, etc.) and their interactions with grammatical verbal categories (modality, polarity, politeness, etc.), grammatical relations (topic, subject, etc.), transitivity, nominalizations, grammaticalization, word order (subject, scrambling, numeral quantifier, configurationality), case marking (ga/no conversion, morphology and syntax), modification (adjectives, relative clause), and structure and interpretation (modality, negation, prosody, ellipsis).

Sommario/riassunto	This book seeks to revise and revive architectural theory through psychoanalysis as well to apply psychoanalytic theory to architecture. Its authors argue for Lacan's central importance for a comprehensive

theory of building and suggest how architectural theory might offer new resources for psychoanalytic theorists. They address both the perceived crisis in the contemporary state of architecture and architectural theory as well as crises in society at large, including political and economic fracture and instability and threats to mental health and well-being. It offers fresh insights to architects, architectural educators, scholars of psychoanalysis, and anyone interested in the human condition in relation to the built environment. John Shannon Hendrix is Professor of Art and Architectural History at Cummings School of Architecture, Roger Williams University, United States. He is the author and editor of numerous articles and books including *Architecture and the Unconscious* (2016, with Lorens Eyan Holm) and *Architecture and Psychoanalysis* (2006). Francesco Proto is Senior Lecturer in Architecture at Oxford Brookes University, UK. He is the author of numerous articles and books including *Baudrillard for Architects* (2019).
