Autore	Kara Hanif
Titolo	Architecture and Waste : A (Re)planned Obsolescence
Pubbl/distr/stampa	New York City : , : Actar D, , 2017 ©2024
ISBN	1-63840-145-4
Edizione	[1st ed.]
Descrizione fisica	1 online resource (380 pages)
Altri autori (Persone)	Asensio-VilloriaLeire GeorgoulisAndreas
Disciplina	725/.4
Soggetti	Sustainable architecture Industrial buildings
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This book explores the intersection of architecture, waste management, and design research. It delves into the role of architects in transforming industrial buildings, which are often perceived as unattractive, into aesthetically pleasing structures. The text examines causes of obsolescence in building design and proposes future possibilities. It includes case studies from around the world, such as the Northeast Coastal Park Waste and Recycling Plant and the Giubiasco Incinerator, to illustrate innovative practices in waste and recycling facility design. The work aims to inspire architects to view waste facilities as opportunities for creative design rather than necessities. The intended audience includes architects, designers, and researchers interested in sustainable architecture and environmental design.
