Livello bibliografico	Monografia
Sommario/riassunto	This book explores the impact of climate change on regional instability in Central America. It delves into the socio-economic and political drivers of migration, intensified by extreme weather events and environmental degradation. The author highlights the role of climate change as a catalyst for displacement, food insecurity, and internal disorder. The book calls for international cooperation and long-term planning to mitigate these effects and ensure migration remains a choice rather than a necessity. It is aimed at policymakers, scholars, and anyone interested in understanding the intersection of climate change and migration.
