

1. Record Nr.	UNINA9910917779203321
Autore	Yen Chi
Titolo	Biosystematics of Triticeae : Volume II. Genera: Secale, Tritiosecale, Pseudosecale, Eremopyrum, Henrardia, Taeniantherum, Heteranthelium, Crithopsis, and Hordeum / / by Chi Yen, Junliang Yang
Pubbl/distr/stampa	Singapore : , : Springer Nature Singapore : , : Imprint : Springer, , 2024
ISBN	9789811580574 981158057X
Edizione	[1st ed. 2024.]
Descrizione fisica	1 online resource (474 pages)
Altri autori (Persone)	YangJunliang WangJirui ZhaoHui ZhangQin TanChao
Disciplina	584.926
Soggetti	Agriculture Plants - Evolution Evolution (Biology) Plant Evolution Evolutionary Biology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Chapter 1. Biosystematics of Secale -- Chapter 2. Biosystematics of Triticale -- Chapter 3. Biosystematics of Pseudosecale -- Chapter 4. Biosystematics of Eremopyrum -- Chapter 5. Biosystematics of Henrardia -- Chapter 6. Biosystematics of Taeniatherum -- Chapter 7. Biosystematics of Heteranthelium -- Chapter 8. Biosystematics of Crithopsis -- Chapter 9. Biosystematics of Hordeum.
Sommario/riassunto	This book discusses the natural classification and biosystematics of Triticeae and presents the most significant findings of comprehensive studies on the Triticeae, an important tribe in the grass family (Poaceae) that includes major crops such as wheat, barley, rye, and triticale, as well as various forage crops found in different genera. The five-volume Chinese version of Biosystematics of Triticeae was

published in 1998, 2004, 2006, 2011, and 2013, and included the 30 genera, two subgenera, 464 species, nine subspecies, and 186 varieties of Triticeae identified to date. This is their English edition. The book is divided into five volumes, covering a wide range of disciplines from traditional taxonomy and cytogenetics to molecular phylogeny. Volume I, *Triticum*-*Aegilops* complex focuses on the taxonomy and generic relationships of *Triticum* and *Aegilops*, discussing the origin of common wheat as a crop. Volume II, Genera: *Secale*, *Tritiosecale*, *Pseudosecale*, *Eremopyrum*, *Henrardia*, *Taeniantherum*, *Heteranthelium*, *Crithopsis*, and *Hordeum* highlights a number of genera that are closely related based on their morphological classification and that contain only one unique genome. Volume III describes perennial genera and species including *Kengilia*, *Douglasdeweya*, *Agropyron*, *Australopyrum*, and *Anthosachne*. Volume IV addresses perennial genera and species including *Stenostachys*, *Psathyrostachys*, *Leymus*, *Pseudoroegneria*, and *Roegeneria*. Volume V presents perennial genera and species such as *Campeostachys*, *Elymus*, *Pascopyrum*, *Lophopyrum*, *Trichopyrum*, *Hordelymus*, *Festucopsis*, *Peridictyon*, and *Psammopyrum*.
