-- Chapter 7: Disordered Eating and the media industry -- Chapter 8: Disordered Eating in the virtual world -- Chapter 9: Orthorexia Nervosa: Eating Disorder for A Pro-Health Era -- Chapter 10: cultural & technological transformations.

Sommario/riassunto

This book draws on original research to critically examine the social and industrial construction of eating disorders and disordered eating, in an analysis that encompasses psychiatry and health, cultural representations, and the politics of eating disorders. Centrally, it examines the extent to which eating disorders are not 'made' by individuals, but rather constructed by groups who claim investment, experience, and expertise in the diagnosis, labeling, treatment, and management of disordered eating. It demonstrates the impacts of biomedical, psychiatric, legal, pharmaceutical, technical and consumer groups, as well as that of the fast-food, fashion, media and social media industries. In doing so, it reveals how they shape the ways that eating disorders are perceived, spoken of, written about, and managed within institutions and wider society. It will appeal to students and scholars of mental health, critical psychology, medical sociology and anthropology and gender studies, and others interested in our future health. Alison Fixsen is a Senior Lecturer in Psychology in the School of Social Sciences, University of Westminster, UK. Alison has had decades of experience in the food, health, and higher education sector, including previous work managing a vegetarian wholefood business and as a complementary therapist before completing her Professional Doctorate in Higher Education Practice. Since 2012, Dr Fixsen has authored over 34 journal papers and book chapters on a wide range of issues relating to the critical mental health and gender studies, neoliberalism and self-care, eating disorders, prescription drug use and critical approaches to social prescribing. .

Sommario/riassunto	This handbook of Old Germanic toponyms is a comprehensive collection of Germanic, possibly Germanic and non-Germanic geographical names of Magna Germania and the adjacent provinces. The selection of headwords is based on Hermann Reichert's Lexikon der altgermanischen Namen (LaN). In the articles, the current state of research concerning the localization of the ancient places (, rivers, forests and mountains) and concerning the etymology and word formation of the toponyms is documented and critically discussed.
