	Nota di contenuto	The Elderly Patient with Kidney Disease: Evaluation -- Epidemiology of

Kidney Disease in the Elderly -- Nephron Senescence Mechanisms -- Acute Kidney Injury in the Elderly -- Obstructive Uropathy in the Elderly -- Lower Urinary Tract Symptoms in the Elderly -- Nocturia and CKD in the Elderly -- Electrolyte Problems in the Elderly -- Hypertension and Kidney Disease in the Elderly -- Diabetic Kidney Disease in the Elderly -- Treatment of Glomerular Disease in the Elderly -- Bone and Mineral Metabolism in the Elderly -- Nutrition in the Elderly Patient with CKD -- Cystic Kidney Diseases in the Elderly -- Pharmacotherapeutics in the Elderly -- Dialysis in the Elderly -- Palliative Care in Kidney Disease.

Sommario/riassunto

There are currently about 52 million people over 65 years of age in the United States, or 16.5% of the U.S. population. This percentage is expected to reach 70 million, or 22%, by 2050. This means that current nephrology trainees can expect to see an increasing number of older patients in their practice throughout their professional lives. Providing nephrology care for older patients with chronic kidney disease (CKD) requires knowledge and skills specific to this population. CKD patients usually require complicated medication routines, complex dietary restrictions, frequent medical visits, and care from multiple physicians. This book will help practitioners better handle the full care of this segment of their patient population and work successfully among geriatricians, internists, and family practitioners. This volume covers everything from evaluation, epidemiology, and a wide range of complicating conditions to treatment options and palliative care. All chapters follow a consistent, easy-to-follow structure, which includes a case presentation, didactics, and a visual abstract. Written by experts in the field, this book is a critical guide for all practitioners who work with aging kidney disease patients. .
