Sommario/riassunto

"This book provides a comparative perspective on housing and planning policies affecting the future of cities, focusing on people-based and place-based outcomes using the nexus of planning, design and policy. A rich mosaic of case studies features good practices of city-led strategies for affordable housing provision, as well as individual projects capitalising on partnerships to build mixed-income housing and revitalise neighbourhoods. Twenty chapters provide unique perspectives on diversity of approaches in seven countries and fifteen cities in Europe, Canada and the USA. Combining academic rigour with knowledge from critical practice, the book uses robust empirical analysis and evidence-based case study research to illustrate the potential of affordable housing partnerships for mixed-income, socially inclusive neighbourhoods as a model to rebuild cities. Cities and Affordable Housing is an essential interdisciplinary collection on planning and design that will be of great interest to scholars, urban professionals, architects, planners and policy-makers interested in housing, urban planning and city building"--

Sommario/riassunto

This book constitutes the proceedings of the 15th International Conference on Risks and Security of Internet and Systems, CRITIS 2020, which took place during November 4-6, 2020. The conference was originally planned to take place in Paris, France, but had to change to an online format due to the COVID-19 pandemic. The 16 full and 7 short papers included in this volume were carefully reviewed and selected from 44 submissions. In addition, the book contains one invited talk in full paper length. The papers were organized in topical sections named: vulnerabilities, attacks and intrusion detection; TLS, openness and security control; access control, risk assessment and security knowledge; risk analysis, neural networks and Web protection; infrastructure security and malware detection.
