Sommario/riassunto	Energy policy is at a crossroads. Attempts to meet targets for carbon emissions, energy security and affordable energy for vulnerable households are all on a trajectory to failure. Aggressive ambitions to roll out huge off-shore wind, nuclear and clean coal plants are proposed, but without any clear plans on how funds will be mobilized, or transmission and distribution infrastructure developed. In this book Prashant Vaze and Stephen Tindale ask politicians and regulators to

consider a different path. Using abundant examples of small scale local solutions Repowering Communities
