#### Sommario/riassunto

This is the first volume concerned with the phonological typology of syllable and word languages, based on the model of a complex, multi-layered and hierarchically structured phonological system. The main typological claim is that the phonetic and phonological make-up of a language depends on the relevance of the prosodic categories. In previous research, the syllable and the phonological word have already proved to be typologically important. The contributions in this volume discuss theoretical questions and address issues such as the variable structure of the phonological word, the interplay between phonetics and phonology as well as the effect of a language's phonological make-up on its morphology or lexicon. The volume provides detailed synchronic and diachronic analyses of (Non-)Indo-European languages which will serve as a basis for further typological research.

Sommario/riassunto	The Climate of Rebellion in the Early Modern Ottoman Empire explores the serious and far-reaching impacts of Little Ice Age climate fluctuations in Ottoman lands. This study demonstrates how imperial systems of provisioning and settlement that defined Ottoman power in the 1500s came unraveled in the face of ecological pressures and extreme cold and drought, leading to the outbreak of the destructive Celali Rebellion (1595-1610). This rebellion marked a turning point in Ottoman fortunes, as a combination of ongoing Little Ice Age climate events, nomad incursions and rural disorder postponed Ottoman recovery over the following century, with enduring impacts on the region's population, land use and economy.
