Sommario/riassunto	You think it can't happen to you, but it can. One day, months into your construction project, your front end load operator runs into bones and wooden slats. Your county coroner says it is not a crime scene, and refers you to the local archaeology department. The archaeologist tells

you that it is a very important discovery. Work stops. Archaeological discoveries happen all the time in the course of projects. Most are manageable, some are less so, and some are mismanaged, wasting time and money. If you are not prepared, the consequences can be disastrous. This book is for project engin
