Autore	Garcia Rubio Fernando
Titolo	Sostenibilidad ambiental y competencias locales [[Recurso electrónico]] : un analisis juridico // Fernando Garcia Rubio
Pubbl/distr/stampa	Madrid : , : Dykinson, , 2015
ISBN	84-9085-626-5
Descrizione fisica	252 p. ; ; 24 cm
Disciplina	344.46046
Soggetti	Derecho ambiental - Espana Administración local - Espana Libros electronicos. Espana Politica ambiental
Lingua di pubblicazione	Spagnolo
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Contiene indice. Contiene jurisprudencia relacionada.
Nota di bibliografia	Contiene bibliografia.
Sommario/riassunto	La obra realiza un analisis de las diversas competencias que pueden ejercer los municipios en materia ambiental tras la reforma de la LRSAL y su grado de intensidad, la conexión de estas competencias con las legislaciones sectoriales estatales y autonomicas en cada una de las materias y los cambios organizativos que el nuevo marco competencial genera para una consecucion del principio de sostenibilidad.

An Alternative to Permanent Geological Disposal -- Notes -- Index of Names -- Index of Subjects

Sommario/riassunto

Shrader-Frechette looks at current U.S. government policy regarding the nation's high-level radioactive waste both scientifically and ethically. What should be done with our nation's high-level radioactive waste, which will remain hazardous for thousands of years? This is one of the most pressing problems faced by the nuclear power industry, and current U.S. government policy is to bury "radwastes" in specially designed deep repositories. K. S. Shrader-Frechette argues that this policy is profoundly misguided on both scientific and ethical grounds. Scientifically-because we cannot trust the precision of 10,000-year predictions that promise containment of the waste. Ethically-because geological disposal ignores the rights of present and future generations to equal treatment, due process, and free informed consent. Shrader-Frechette focuses her argument on the world's first proposed high-level radioactive waste facility at Yucca Mountain, Nevada. Analyzing a mass of technical literature, she demonstrates the weaknesses in the professional risk-assessors' arguments that claim the site is sufficiently safe for such a plan. We should postpone the question of geological disposal for at least a century and use monitored, retrievable, above-ground storage of the waste until then. Her message regarding radwaste is clear: what you can't see can hurt you.

Sommario/riassunto	Olonkho is the general name for the entire Yakut heroic epic that consists of many long legends - one of the longest being 'Nurgun Botur the Swift' consisting of some 36,000 lines of verse, published here. Like Homer's Iliad and Odyssey, the Finnish Kalevala, the Buryat Geser, and the Kirghiz Manas, the Yakut Olonkho is an epic of a very ancient origin dating back to the period - possibly as early as the eighth or ninth centuries - when the ancestors of the present-day Yakut peoples lived on their former homeland and closely communicated with the Turkic and Mongolian peoples living in the Alta.
