Sommario/riassunto	Humankind evolved through three psychological stages - subconscious, conscience, and supraconsciousness. Ritual and myth, cosmology and theism marked phases of psychic integration, initiating our supraconsciousness evolution. Four archetypes: temperance, 'the great chain of being,' Biblical interpretation, and Divinity became the Cosmic consciousness of secular man. Study of Scripture developed a communal supraconsciousness. Mystics' dedication showed us the deeper

meaning of a life purpose. Yet, heretics taught man faith in the superior power of the free mind. Heresy helped evolve humanity's secular supraconscious. Indeed, the exponential growth of psyche's powers and the continuous revelation of new, secular knowledge seems the fulfillment of Revelation. Finally, the enlightened understood that when God created the earth, he included evolution so that our kind would evolve a superior nature. Hence, religious and scientific, secular and humanistic developments reveal themselves to be the primary powers accelerating human evolution. Together, they have nurtured humankind's ever-evolving supraconscious.
