Sommario/riassunto	Interest in recent years in reconciliation and conflict transformation has witnessed a great deal of attention to building a future through forgiveness and preventative measures in order to impede egregious wrongdoing. This effort for a reconciled future is absent reflection on the nature of cruelty. Cruelty has always been apparent in massive acts of wrongdoing and yet is repeatedly concealed in our assessment of the acts themselves. This book is a theologically honest and deep-structure exploration of cruelty in its personal, communal and institutional encounters in human life. Drawing on Nietzsche's challenge of cruelty to the western tradition, the work offers a comprehensive study of how cruelty undermines care, trust, respect and justice – all those elements of human reciprocity that mark our lives as interdependent beings. The work concludes with a tightly written Epilogue on interpreting the theological meaning and accessibility of reconciliation today.

Sommario/riassunto	This book is one of a series of five volumes forming an integrated, self-study course on silicon device physics, modes of operation, characterization, and fabrication. The series is based on many years of the author's experience in academic and industrial teaching of semiconductors. The books are suitable for both class-teaching and self-study. The authors have designed the content to enable readers to be introduced gradually to semiconductors, in particular silicon components. The presentation includes many illustrations, practical examples, review questions and problems at the end of each chapter. Answers to review questions and solutions to problems will be provided for "self-check". Complements courses covering silicon device physics, mode of components, characterization, and fabrication; Enables comprehensive, self-study in semiconductors, aimed at practicing engineers or university students; Includes many illustrations, practical examples, review questions and problems at the end of each chapter.

Process Thought

Sommario/riassunto

Concentrating mainly on the process philosophy developed by Alfred North Whitehead, this series of essays brings together some of the newest developments in the application of process thinking to the physical and social sciences. These essays, by established scholars in the field, demonstrate how a wider and deeper understanding of the world can be obtained using process philosophical concepts, how the distortions and blockages inevitably inherent in substantivist talk can be set aside, and how new and fertile lines of research in the sciences can be opened as a result.
