

1. Record Nr.	UNINA9910955850003321
Titolo	Pathway modeling and algorithm research / / Nikos E. Mastorakis, editor
Pubbl/distr/stampa	Hauppauge, N.Y., : Nova Science Publishers, c2011
ISBN	1-61209-475-9
Edizione	[1st ed.]
Descrizione fisica	1 online resource (193 p.)
Collana	Computer science, technology and applications
Altri autori (Persone)	MastorakisNikos E
Disciplina	005.1
Soggetti	Fault-tolerant computing Mobile computing Algorithms
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- PATHWAY MODELING AND ALGORITHM RESEARCH -- PATHWAY MODELING AND ALGORITHM RESEARCH -- CONTENTS -- PREFACE -- Chapter 1 BIOLOGICAL PATHWAYS AND THEIR MODELING -- Abstract -- 1. Introduction -- 2. Classification -- 2.1. Gene Regulatory Networks (GRN) -- 2.2. Signaling Pathways (SP) -- 2.3. Metabolic Pathways (MP) -- 3. Modeling Biological Pathways -- 4. Current Research -- Conclusions -- References -- Chapter 2 SUPERVISED LEARNING APPROACHES IN PATHWAY MODELING -- Abstract -- 1. Introduction -- 2. Classification via Supervised Learning -- 2.1. Various Approaches -- 2.1.1. Artificial Neural Networks (ANN) -- 2.1.1.1. Application to Metabolic Pathway Modeling -- 2.1.1.2. Application to Signal Transduction Modeling -- 2.1.1.3. Application to Gene Regulatory Network Modeling -- 2.1.2. Support Vector Machines (SVM) -- 2.1.2.1. Application to Metabolic Pathway Modeling -- 2.1.2.2. Application to Gene Regulatory Network Modeling -- 2.1.2.3. Application to Signal Transduction Modeling -- 2.1.3. Nearest Neighbor Approach -- 2.1.3.1. Application to Metabolic Pathway Modeling -- 2.1.3.2. Application to Gene Regulatory Network Modeling -- 2.1.3.3. Application to Signal Transduction Modeling -- 2.1.4. Bayesian Classifier -- 2.1.4.1. Application to Metabolic Pathway Modeling -- 2.1.4.2. Application to Gene Regulatory Network Modeling -- 2.1.4.3. Application to Signal Transduction Modeling -- 2.1.5. Logistic

Regression -- 2.1.5.1. Application to Metabolic Pathway Modeling --
 2.1.5.2. Application to Gene Regulatory Network Modeling -- 2.1.5.3.
 Application to Signal Transduction Modeling -- 2.1.6. Discriminant
 Analysis -- 2.1.6.1. Application to Metabolic Pathway Modeling --
 2.1.6.2. Application to Gene Regulatory Network Modeling -- 2.1.6.3.
 Application to Signal Transduction Modeling -- 2.1.7. Decision Trees.
 2.1.7.1. Application to Metabolic Pathway Modeling -- 2.1.7.2.
 Application to Gene Regulatory Network Modeling -- 2.1.7.3.
 Application to Signal Transduction Modeling -- 3. Current Research --
 Conclusions -- References -- Chapter 3 SHORTEST PATH ALGORITHMS
 IN PATHWAY ANALYSIS -- Abstract -- 1. Introduction -- 2. Shortest
 Path Algorithms -- 3. Types of Shortest Path Algorithms -- 3.1.
 Dijkstra's Algorithm -- 3.1.1. Algorithm -- 3.1.2. Pseudocode -- 3.1.3.
 Time Complexity -- 3.2. Bellman-Ford Algorithm -- 3.2.1. Algorithm
 -- 3.2.2. Pseudocode -- 3.2.3. Time Complexity -- 3.3. Floyd-Warshall
 algorithm -- 3.3.1. Algorithm -- 3.3.2. Pseudocode -- 3.3.3. Time
 Complexity -- 3.4. Johnson's Algorithm -- 3.4.1. Algorithm -- 3.4.2.
 Pseudocode -- 3.4.3. Time Complexity -- 3.5. Breadth First Search
 (BFS) -- 3.5.1. Algorithm -- 3.5.2. Pseudocode -- 3.5.3. Time
 Complexity -- 3.6. k-Shortest Paths -- 3.6.1. Algorithm -- 3.6.2.
 Pseudo-Code -- 3.6.2.1. Removing Path Algorithm -- 3.6.2.2.
 Deviation Path Algorithm -- 3.6.3. Time Complexity -- 3.7. Linear
 Programming -- 3.7.1. Algorithm -- 3.7.2. Pseudo-Code -- 3.7.3.
 Time Complexity -- 4. Application of Shortest Path Algorithms in
 Biological Pathways -- 4.1. Application to Metabolic Pathway Modeling
 -- 4.2. Application to Signal Transduction Modeling -- 4.3. Application
 to Gene Regulatory Network Modeling -- 5. Current Research --
 Conclusion -- References -- Chapter 4 CLUSTERING ALGORITHMS IN
 PATHWAY MODELING -- Abstract -- 1. Introduction -- 2. Clustering
 Algorithms -- 3. Types of Clustering Algorithms -- 3.1. Hierarchical
 Clustering -- 3.2. Partition Clustering -- 3.3. Mixture Models -- 4.
 Application of Clustering Algorithms in Biological Pathways -- 4.1.
 Application to Metabolic Pathway Modeling -- 4.2. Application to Signal
 Transduction Modeling -- 4.3. Application to Gene Regulatory Network
 Modeling.
 5. Current Research -- Conclusion -- References -- Chapter 5
 PATHWAY MODELING: NEW FACE OF GRAPHICAL PROBABILISTIC
 ANALYSIS -- Abstract -- 1. Introduction -- 2. Graphical Probabilistic
 Models -- 3. Types of Graphical Probabilistic Models -- 3.1. Bayesian
 Networks -- 3.2. Gaussian Networks -- 3.3. Maximum Likelihood --
 3.4. Density Estimation -- 3.5. Helmholtz Machine (HM) -- 3.6. Latent
 Variable Models (LVM) -- 3.7. Generative Topographic Mapping (GTM)
 -- 3.8. Hidden Markov Model (HMM) -- 4. Application of Graphical
 Probabilistic Models -- 4.1. Application to Metabolic Pathway Modeling
 -- 4.2. Application to Signal Transduction Modeling -- 4.3. Application
 to Gene Regulatory Networks -- 5. Current Research -- Conclusion --
 References -- Chapter 6 INDUCTIVE LOGIC PROGRAMMING IN
 PATHWAY ANALYSIS -- Abstract -- 1. Introduction -- 2. Inductive Logic
 Programming -- 3. Types of Inductive Logic Programming -- 3.1.
 Probabilistic Inductive Logic Programming -- 3.2. Collaborative
 Inductive Logic Programming -- 3.3. Generic Rough Set Inductive Logic
 Programming -- 3.4 Constraint Inductive Logic Programming -- 3.5.
 Support vector Inductive Logic Programming -- 3.6. Low Size-
 Complexity Inductive Logic Programming -- 3.7. Non-monotonic
 Inductive Logic Programming -- 4. Application of Inductive Logic
 Programming in Biological Pathways -- 4.1. Application to Metabolic
 Pathway Modeling -- 4.2. Application to Signal Transduction Modeling
 -- 4.3. Application to Gene Regulatory Network Modeling -- 5. Current

Research -- Conclusion -- References -- Chapter 7 GRAPHICS
 ALGORITHMS UNDER HIGH PERFORMANCE RECONFIGURABLE SYSTEMS
 -- Abstract -- 1. Introduction -- 2. Reconfigurable Computing Systems
 -- 2.1. History of Reconfigurable Computing -- 2.2. Field
 Programmable Gate Arrays -- 2.3. Reconfigurable Systems Generalities
 -- 2.3.1. Granularity.
 2.3.2. Depth of Programmability -- 2.3.3. Reconfigurability -- 2.3.4.
 Interface Coupling -- 2.4. Reconfigurable Systems -- 2.5. Application
 of Reconfigurable Systems -- 2.5.1. Information Coding -- 2.5.2. Space
 and Solar Applications -- 2.5.3. Digital Signal Processing -- 2.5.4.
 Digital Image Processing -- 2.5.5. Biomedical Engineering -- 2.5.6.
 Networking -- 2.5.7. Security -- 2.6. High-Level Reconfigurable
 Hardware Development -- 2.7. Future of RC-Systems at a Glance -- 3.
 The MorphoSys -- 3.1. The Core Processor -- 3.2. The Reconfigurable
 Cell -- 3.3. The Reconfigurable Cell Array -- 3.4 The Context Memory
 -- 3.5. The Frame Buffer and the DMA Controller -- 3.6. The
 MorphoSys Execution Flow Model -- 3.7. Important Features of
 MorphoSys -- 4. Graphics Geometrical Transformations under
 MorphoSys -- 4.1. Geometrical Transformations -- 4.1.1. Translations
 -- 4.1.2. Scaling -- 4.1.3. Rotation and Shearing -- 4.2. Mapping
 Translation and Scaling in Basic Forms -- 4.2.1. Translation Using
 Vector-vector Operations -- 4.2.2. Scaling Using Vector-scalar
 Operations -- 4.3. Basic Transformation Compositions -- 4.3.1.
 Composition of Two Translations -- 4.3.2. Composition of Two Scaling
 Transformations -- 4.3.3. Composition of Translation and Scaling --
 4.4. Transformations Using the General Matrix Form -- 4.4.1. First
 Mapping -- 4.4.1. Second Mapping -- 4.5. Performance Evaluation and
 Analysis -- Conclusion -- References --
 Chapter 8 COMPUTATIONALLY EFFICIENT APPROXIMATION SCHEMES FOR FU
 NCTIONAL OPTIMIZATION -- Abstract -- 1. Introduction -- 2.
 Theoretical Issues -- 2.1. Fixed-Basis versus Variable-
 Basis Approximation Schemes -- 2.2.
 Accuracy of Suboptimal Solutions by Variable-Basis Approximation Schemes
 -- 2.3. Summing Up -- 3. An Example: Optimal Fault Diagnosis -- 3.1.
 Statement of an Optimal Diagnosis Problem -- 3.2.
 Reduction to a Nonlinear Programming Problem by Variable-
 Basis Approximation Schemes.
 3.3. Optimization of the Parameters in the Variable-Basis Functions -- 4.
 Case Study and Numerical Results -- References -- INDEX -- Blank Page.

Sommario/riassunto

Presents and discusses research in the study of computer science. This
 title includes topics such as: biological pathways; supervised learning
 approaches; pathway modelling; shortest path algorithms; clustering
 algorithms; and, inductive logic programming and computationally
 efficient approximation schemes for functional optimisation.
