Sommario/riassunto	"On a cold Wednesday morning in February 2003 Colin Powell argued

before the United Nations Security Council that Iraq harbored weapons of mass destruction. Before the speech, nearly 90 percent of Americans reported that Powell's speech would help them determine their view about invading Iraq. In the days after the speech, a strong majority of Americans reported that they found Powell's evidence convincing enough to justify war. But most American adults did not watch Powell's speech. Instead, they learned about it from journalists, and to a large extent formed their opinions about war with Iraq based on news coverage of his address. In *Intertextuality and the 24-Hour News Cycle* John Oddo investigates the "rhetorical life" of Colin Powell's address as it was extended across several media reports. Focusing on one day of pre- and postspeech news coverage, Oddo examines how journalists influenced Powell's presentation, precontextualizing and recontextualizing his speech, and prepositioning and repositioning audiences to respond to it. The book surveys a variety of news media (television, newspaper, and Internet) and systematically integrates several methodological approaches (critical, rhetorical, discourse-analytic, and multimodal). This revealing text shows the decisive role that journalists played in shaping American attitudes about Powell, his presentation, and the desirability of war in Iraq"--Publisher.

<b>Livello bibliografico</b>	Monografia
<b>Note generali</b>	Description based upon print version of record.
<b>Nota di bibliografia</b>	Includes bibliographical references and index.
<b>Nota di contenuto</b>	1. Are a Million Species at Risk? -- 2. First Estimates of Extinction Risk from Climate Change -- 3. Climate Change, Extinction Risk, and Public Policy -- 4. Refining Risk Estimates Using Models -- 5. The Use and Misuse of Species-Area Relationships in Predicting Climate-Driven Extinction -- 6. First Extinctions on Land -- 7. Global Warming and Widespread Coral Mortality: Evidence of First Coral Reef Extinctions -- 8. Extinction Risk at High Latitudes -- 9. Extinctions in Deep Time -- 10. Terrestrial Ecosystem Response to Climate Change during the Paleogene -- 11. Quaternary Extinctions and Their Link to Climate Change -- 12. Quaternary Tropical Plant Extinction: A Paleoecological Perspective from the Neotropics -- 13. Every Species Is an Insect (or Nearly So): On Insects, Climate Change, Extinction, and the Biological Unknown -- 14. Extinction Risk from Climate Change in Tropical Forests -- 15. Coral Reefs, Climate Change, and Mass Extinction -- 16. Extinction Risk in a Changing Ocean -- 17. Climate Change and

Freshwater Fauna Extinction Risk -- 18. Climate Change Impacts on Species Interactions: Assessing the Threat of Cascading Extinctions -- 19. Strategies for Reducing Extinction Risk under a Changing Climate -- 20. Saving a Million Species.

---

**Sommario/riassunto**

---

Saving a Million Species examines the question, how many species will perish as a result of climate change and associated threats? Written by leaders from a range of disciplines, it offers detailed, clear explanations that synthesize the literature and elaborate on the conservation and policy implications of climate change science.
