Sommario/riassunto

While literacy has always been central to language planning work, there are fewer studies which focus primarily on literacy as a language planning activity. Often planning for literacy is treated as an aspect of status, corpus or language-in-education planning, rather than addressing literate practice itself as a planning objective. This volume investigates the complex issues and social and political pressures relating to literacy in a variety of language planning contexts around the world. The studies presented in this book examine language planning for literacy in official and vernacular languages and address issues relating to literacy in first and additional languages in North America, Asia, Africa, Europe and the Pacific. As a collection, these studies show that language planning for literacy is not simply a matter of planning a written version of a language, but involves more complex questions relating to the nature and practice of literacy and the power relations which exist within societies.

Sommario/riassunto

The aim of Catalogue of Palaearctic Coleoptera is to provide a tool that addresses the most urgent needs: 1) a complete list of available names of taxa occurring in the Palaearctic Region with authors and publications dates, 2) a list of references to primary publications, 3) distributions of the species and subspecies. Thus, the Catalogue is expected to respond to questions related to biodiversity, and to increase the badly needed nomenclatural stability. The present updated and revised Catalogue is a collective international work by 12 authors from Austria, Belgium, China, Korea, Japan and Russia. It includes about 6453 species names of 913 genera. The general structure and the taxonomic, distributional and bibliographical information of the first edition of the Catalogue are followed with minor changes.
