Nota di contenuto	Research Agenda for Test Methods and Models to Simulate the Accelerated Aging of Infrastructure Materials -- Copyright -- In Memoriam -- Acknowledgements -- Contents -- Executive Summary -- 1 Workshop Synopsis and Committee Findings and Recommendations -- INTRODUCTION -- BACKGROUND -- ORGANIZATION OF THE WORKSHOP -- COMMITTEE FINDINGS AND RECOMMENDATIONS -- Life-Prediction Modeling -- Accelerated-Testing Methods -- LIMITATIONS AND BARRIERS -- 2 Background Presentations -- FIVE OVERVIEW BRIEFINGS -- Infrastructure Aging and Deterioration -- REFERENCES -- Infrastructure Considerations: Surgical Implant Devices -- As High Performance Integrated Circuits Enter the National (and International) Infrastructure, How Do We Know They Are... -- Durable Glass for Thousands of Years? That Is the Question. -- Life-Cycle Performance in the Electric Utility Industry -- TWO FOCUS BRIEFINGS -- Life-Prediction Approaches for Infrastructure Applications -- Accelerated-Testing Approaches for Infrastructure Applications -- REFERENCE -- Appendixes -- A Workshop Agenda -- B Biographical Sketches of Committee Members -- C Workshop Participants.
Sommario/riassunto	In the next several decades, a significant percentage of the country's transportation, communications, environmental, and power system infrastructures, as well as public buildings and facilities, will have to be renewed or replaced. Next-generation infrastructure will have to meet very high expectations in terms of durability, constructability, performance, and life-cycle cost. One way of meeting future expectations will be through improved, high-performance materials, but before new materials can be confidently deployed in the field, a thorough and comprehensive understanding must be developed of their long-term performance in a variety of applications and physical environments. The National Science Foundation (NSF) has launched an initiative to promote the development of innovative short-term laboratory or in-situ tests for making accurate, reliable predictions of the long-term performance of materials and requested that the National Research Council (NRC) conduct a workshop as a reconnaissance-level assessment of models and methods that are being used, or potentially could be used, to determine the long-term performance of infrastructure materials and components.

Sommario/riassunto	Over the last fifteen years there have been dramatic increases in both

private and public intervention in international trade. Traditional barriers to market-based trade such as commodity cartels and tariffs have been augmented by new developments such as the rise of regional trade blocs and the growth of intra-firm trade. This book argues that these changes are large and persistent enough to have an impact on total development performance, and on the performance of individual countries and individual sectors. It illustrates this with a wealth of theoretical arguments, empirical evidence and c
