Sommario/riassunto

This intermediate workbook, like the other materials in the Norsk, nordmenn og Norge series, regards communication as the primary goal of language learning. Experience has shown that students need to pass through a period of meaningful structural practice as they develop their communication skills. The workbook aims to provide that practice in psychologically realistic and useful ways, combining entertaining activities with more traditional exercises. Toward these ends, the workbook features:

- an extensive overview of the basics of Norwegian grammar, providing a ready reference throughout the course
- a thorough review of elementary Norwegian vocabulary and grammar, allowing students whose preparation in the language differs to share a common knowledge base
- Hvem er du? sections that encourage the learner to personalize the material
- Litt av hvert sections that provide short summaries of the anthology's reading passages (lesestykker) while reviewing common problems with vocabulary and grammar
- crossword puzzles and cartoons.

Norsk, nordmenn og Norge: Arbeidsbok (Workbook) is a companion to the Norsk, nordmenn og Norge: Antologi (Anthology) and Lærerveiledning (Teacher's Manual).

Sommario/riassunto

With a focus on environmentally friendly rice farming, this unique book integrates both ecosystem and human dimensions of ecological restoration to provide strategies to promote sustainable agriculture and rural development. Paddy fields have multiple functions beyond their role of producing rice: They serve as refuge habitats for a range of wildlife that once inhabited floodplain wetlands and contain a number of unique and threatened aquatic species. They also provide various ecosystem services for regional communities such as water retention, erosion control, flood control, fish culture, and educational opportunities. However, rice paddies are threatened worldwide due to the modernization of agriculture and abandonment of farmland caused by depopulation and the aging of rural communities. Therefore, multiple ecological and sociological aspects must be considered in the ecological restoration of paddy fields. This book aims to do so by incorporating various disciplines of natural and social sciences. Strategies for sustainable agriculture are reviewed, including financial incentives for farmers and the use of flagship wildlife species such as the crested ibis (toki) to promote ecological restoration. With the

increasing popularity of environmentally friendly rice farming in parts of Asia and the western United States, this book offers model cases for sustainable management of paddy-dominated landscapes.
