Sommario/riassunto

The establishment of a settlement at the Cape of Good Hope in the seventeenth century and an expansion of the sphere of colonial influence in the eighteenth century made South Africa the only part of sub-Saharan Africa where Europeans could travel with relative ease deep into the interior. As a result individuals with scientific interests in Africa came to the Cape. This book examines writings and drawings of scientifically educated travellers, particularly in the field of ethnography, against the background of commercial and administrative discourses on the Cape. It is argued that the scientific travellers benefited more from their relationship with the colonial order than the other way around.

## Sommario/riassunto

Did earlier speakers of English use the same speech acts that we use today? Did they use them in the same way? How did they signal speech act values and how did they negotiate them in case of uncertainty? These are some of the questions that are addressed in this volume in innovative case studies that cover a wide range of speech acts from Old English to Present-day English. All the studies offer careful discussions of methodological and theoretical issues as well as detailed descriptions of specific speech acts. The first part of the volume is devoted to directives and commissives, i.e. speech acts such as requests, commands and promises. The second part is devoted to expressives and assertives and deals with speech acts such as greetings, compliments and apologies. The third part, finally, contains technical reports that deal primarily with the problem of extracting speech acts from historical corpora.
