## Sommario/riassunto

Cancer is one of the most rapidly changing areas of medicine, affecting ever-increasing numbers of people, and this new edition of Lecture Notes: Oncology brings together all the information a medical student or graduate clinician needs in one accessible volume. It covers the scientific basis and social impact of cancer, describes the origins and presentations of cancer on a regional and system basis, and discusses the fundamentals of oncology treatment and patient management. Including a new section on epigenetics, clinical vignettes, clear illustrations, tables and diagrams, as well as a self-test section of MCQs, Lecture Notes: Oncology provides core knowledge for professionals involved in cancer care.
