Sommario/riassunto	In this unique, prize-winning study Danielle Quinodoz unravels the unconscious significance of the feelings of vertigo which arise in situations where there is no immediate physical danger of falling and

no organic cause. She traces the origins of such emotional vertigo to inner anxieties around separation which are expressed somatically at different levels according to the level of anxiety. Through a detailed case study of a patient who developed the symptoms of vertigo during analysis the author offers some thought-provoking insights into the vicissitudes of the object relationship
