Sommario/riassunto

This volume explores properties of 'sit', 'stand', and 'lie' verbs, reflecting three of the most salient postures associated with humans. An introductory chapter by the Editor provides an overview of directions for research into posture verbs. These directions are then explored in detail in a number of languages: Dutch; Korean; Japanese; Lao; Chantyal, Magar (Tibeto-Burman); Chipewyan (Athapaskan); Trumai (spoken in Brazil); Kxoe (Khoisan); Mbay (Nilo-Saharan); Oceanic; Enga, Ku Waru (Papuan); Arrernte, Pitjantjatjara, Ngan'gityemerri (Australian). The contributors discuss data relevant to many fields of linguistic inquiry, including patterns of lexicalization (e.g., simplex or complex verb forms), morphology (e.g., state vs. action formations), grammaticalization (e.g., extension to locational predicates, aspect markers, auxiliaries, copulas, classifiers), and figurative extension. A final chapter reports on an experimental methodology designed to establish the relevant cognitive parameters underlying speakers' judgements on the polysemy of English stand. Taken together, the chapters provide a wealth of cross-linguistic data on posture verbs.
