	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Includes index.

Nota di contenuto

1 Light and Shadows -- 2 Reflection of Light -- 3 Refraction of Light -- 4 The Curvature of Light Rays in the Atmosphere -- 5 The Measurement of Intensity and Brightness of Light -- 6 The Eye -- 7 Colors -- 8 Afterimages and Contrast Phenomena -- 9 Judging Shape and Motion -- 10 Rainbows, Halos, and Coronas -- 11 Light and Color of the Sky -- 12 Light and Color in the Landscape -- 13 Luminous Plants, Animals, and Stones -- Appendix A . Measuring Angles out of Doors -- Appendix B. Photographing Natural Phenomena -- Appendix C. Further Notes and References.

Sommario/riassunto

All of science springs from the observation of nature. In this classic book, the late Marcel Minnaert accompanies the reader on a tour of nature's light and color and reveals the myriad phenomena that may be observed outdoors with no more than a pair of sharp eyes and an enquiring mind. From the intriguing shape of the dapples beneath a tree on a sunny day, to rainbows, mirages, and haloes, to the colors of liquid, ice, and the sky, to the appearance of the sun, moon, planets, and stars - Minnaert describes and explains them all in clear language accessible to the layman. This volume includes 80 new photographs, over half in color, illustrating many of the phenomena - ordinary and exotic - discussed in the book. Most of the new photos are by Pekka Parviainen, the renowned Finnish nature photographer.
