Sommario/riassunto	The minimum performance criteria for active interrogation systems in homeland security applications are described in this standard. These systems are intended for non-intrusive inspection of closed containers, vehicles, and packages of a wide range of types and sizes. In these systems, the contents of an inspection zone are irradiated with penetrating ionizing radiation to determine the presence of a hidden substance-of-interest by the analysis of stimulated secondary radiations or absorption spectra that are indicative of the elemental and/or isotopic composition of the substances-of-interest (special nuclear material, explosives, chemical warfare agents).

Sommario/riassunto	This book is a significant contribution to existing research on the themes of race and slavery in the founding literature of the United

States. It extends the boundaries of existing research by locating race and slavery within a transnational and 'oceanic' framework. The author applies critical concepts developed within postcolonial theory to American texts written between the national emergence of the United States and the Civil War, in order to uncover metaphors of the colonial and imperial 'unconscious' in America's foundational writing. The book analyses the writings of canonized autho
