Sommario/riassunto	This book focuses on the drug discovery and development applications

of transition metal catalyzed processes, which can efficiently create preclinical and clinical drug candidates as well as marketed drugs. The authors pay particular attention to the challenges of transitioning academically-developed reactions into scalable industrial processes. Additionally, the book lays the groundwork for how continued development of transition metal catalyzed processes can deliver new drug candidates. This work provides a unique perspective on the applications of transition metal catalysis in drug discovery

Sommario/riassunto

Astutely reading the writings of early Christianity as part of the lively conversation of the Graeco-Roman world, Robert M. Grant helped reshape the study of the New Testament and early Christianity for scholars in the United States and Europe. *Reading Religions in the Ancient World* honors his work with sixteen essays by his colleagues and students, arranged under the headings of Classical Studies, New Testament Studies and Patristic Studies. These essays reflect and extend the research interests of the honoree; signal the breadth and depth of Professor Grant's own scholarly interests and productivity; and contribute to each of these important aspects of religion in the ancient world.
