Sommario/riassunto	This book is a compendium on economics specially designed for development practitioners and civil-society activists who do not have formal training in the subject. It provides an understanding of microeconomics, knowledge of the macroeconomic environment and insights from the specialized area called development economics.

Through separate chapters, it covers poverty, inequality, social and gender discrimination, and environmental impact. Economics in Action provides the necessary knowledge to participants of public debates who do not have a background in economics and would like to reinforce their arguments and analyses with sound economic theory. It also carries specific tips on using economics in development practice and interventions. The author, in general, tries to relate the ideas and relationships described in economics with the real-world problems that we may encounter as part of our lives.

2. Record Nr.	UNINA9910959847303321
Autore	Teisch Jessica B
Titolo	Engineering nature : water, development, & the global spread of American environmental expertise // Jessica B. Teisch

Nota di contenuto	Lessons of valuable experience : what California learned from India -- A great mission for the race : lessons and experiences from California -- The California model and the Australian awakening -- Home is not so very far away : civilizing the South African frontier -- Nothing but commercial feudalism : California's Hawaiian empire -- Palestine's peculiar social experiments.

Sommario/riassunto

Focusing on globalization in the late nineteenth and early twentieth centuries, Jessica Teisch examines the processes by which American water and mining engineers who rose to prominence during and after the California Gold Rush of 1849 exported the United States' growing technical and environmental knowledge and associated social and political institutions. In the frontiers of Australia, South Africa, Hawaii, and Palestine--semiarid regions that shared a need for water to support growing populations and economies--California water engineers applied their expertise in irrigation and mining proj
