| Sommario/riassunto      | This book is the first of two books about sea urchins (echinoids) since 1953 (Th. Mortensen). The detailed and coloured illustrated descriptions enable the reader to identify all species living today in our oceans. Recent scientific searchings are included. Volume I. describes the sea urchins with pentameral symmetry and either with a few spines (cidaroids) or with more or less numerous spines ("regulars") living on the sea floor. |

Sommario/riassunto

Volume Two of this retrospective bibliography is both a continuation and an expansion of Volume One (1984). It contains references to Canadian medical-historical literature published between 1984 and 1998, and also includes much additional material published prior to 1984. Finally, it substantially enlarges the content of French-language material. Every effort has been made to be as inclusive as possible of articles, theses, book chapters and books, both in English and in French, relating to the history of medicine. No single electronic source can replace this bibliography.
