Sommario/riassunto

A unified and coherent treatment of analytical, computational and experimental techniques of nonlinear dynamics with numerous illustrative applications. Features a discourse on geometric concepts such as Poincaré maps. Discusses chaos, stability and bifurcation analysis for systems of differential and algebraic equations. Includes scores of examples to facilitate understanding.

Nota di contenuto	General introduction -- Portrait of an Austrian liberal : Max Menger's liberal position -- Carl Menger as journalist and tutor of Crown Prince -- Carl Menger's Grundsätze in the making -- Carl Menger and historicism in German economics -- Anonymous history in Austrian economic thought -- Alternative equilibrium vision in Austrian economics -- Karl Knies, Max Weber, and Austrians : a Heidelberg connection -- Determinateness and indeterminateness in Schumpeter's economic sociology : the origin of social evolution -- Evolutionist turn of the Marx-Weber problem.
Sommario/riassunto	This book intends to renovate the view of social sciences in the German-speaking world. It explores the intellectual tension in the social science in Austria and Germany in the late-nineteenth and early-twentieth centuries. It deals with how the emergence of the new school (Austrian School) changed the focus of social science in the German speaking world, and how it prepared the introduction of an evolutionary perspective in economics, politics, and sociology. Based on (mostly hitherto unknown) primary evidence, this development is

lively described in a series of encounters and decisions by
