

1. Record Nr.	UNINA9910961598003321
Autore	Ramsay J. O (James O.)
Titolo	Functional Data Analysis // by James Ramsay, B. W. Silverman
Pubbl/distr/stampa	New York, NY : , : Springer New York : , : Imprint : Springer, , 2005
ISBN	9786610612420 9786610006854 9780387400808 038740080X 9781601193094 1601193092 9781280006852 1280006854 9781280612428 1280612428 9780387227511 0387227512
Edizione	[2nd ed. 2005.]
Descrizione fisica	1 online resource (xix, 426 pages) : illustrations
Collana	Springer Series in Statistics, , 2197-568X
Altri autori (Persone)	SilvermanB. W. <1952->
Disciplina	519.5
Soggetti	Statistics Statistical Theory and Methods
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (p. [293]-302) and index.
Nota di contenuto	Tools for exploring functional data -- From functional data to smooth functions -- Smoothing functional data by least squares -- Smoothing functional data with a roughness penalty -- Constrained functions -- The registration and display of functional data -- Principal components analysis for functional data -- Regularized principal components analysis -- Principal components analysis of mixed data -- Canonical correlation and discriminant analysis -- Functional linear models -- Modelling functional responses with multivariate covariates -- Functional responses, functional covariates and the concurrent model -- Functional linear models for scalar responses -- Functional linear models for functional responses -- Derivatives and functional linear

models -- Differential equations and operators -- Fitting differential equations to functional data: Principal differential analysis -- Green's functions and reproducing kernels -- More general roughness penalties -- Some perspectives on FDA.

---

## Sommario/riassunto

Scientists and others today often collect samples of curves and other functional observations. This monograph presents many ideas and techniques for such data. Included are expressions in the functional domain of such classics as linear regression, principal components analysis, linear modeling, and canonical correlation analysis, as well as specifically functional techniques such as curve registration and principal differential analysis. Data arising in real applications are used throughout for both motivation and illustration, showing how functional approaches allow us to see new things, especially by exploiting the smoothness of the processes generating the data. The data sets exemplify the wide scope of functional data analysis; they are drawn from growth analysis, meteorology, biomechanics, equine science, economics, and medicine. The book presents novel statistical technology, much of it based on the authors' own research work, while keeping the mathematical level widely accessible. It is designed to appeal to students, to applied data analysts, and to experienced researchers; it will have value both within statistics and across a broad spectrum of other fields. This second edition is aimed at a wider range of readers, and especially those who would like to apply these techniques to their research problems. It complements the authors' other recent volume *Applied Functional Data Analysis: Methods and Case Studies*. In particular, there is an extended coverage of data smoothing and other matters arising in the preliminaries to a functional data analysis. The chapters on the functional linear model and modeling of the dynamics of systems through the use of differential equations and principal differential analysis have been completely rewritten and extended to include new developments. Other chapters have been revised substantially, often to give more weight to examples and practical considerations. Jim Ramsay is Professor of Psychology at McGill University and is an international authority on many aspects of multivariate analysis. He was President of the Statistical Society of Canada in 2002-3 and holds the Society's Gold Medal for his work in functional data analysis. Bernard Silverman is Master of St Peter's College and Professor of Statistics at Oxford University. He was President of the Institute of Mathematical Statistics in 2000-1. He is a Fellow of the Royal Society. His main specialty is in computational statistics, and he is the author or editor of several highly regarded books in this area. .
