Nota di contenuto	1. Not here, not there, not anywhere : an introduction -- 2. The half-life of federal responsibility : the devolution of LLRW disposal -- 3. Glowing recommendations : NIMBY, environmental justice, and the framing of LLRW site selection -- 4. Power generation : active opposition to LLRW site proposals -- 5. Critical masses : disruptive versus conventional forms of active opposition -- 6. Radioactive decay : implementation failure -- 7. Predictable distintegration and stability : the fragile equilibrium of LLRW disposal policy.
Sommario/riassunto	In 1979, provoked by the Three Mile Island nuclear accident, governors of states hosting disposal facilities for low-level radioactive waste (LLRW) refused to accept additional shipments. The resulting shortage of disposal sites for wastes spurred Congress to devolve responsibility for establishing new, geographically diffuse LLRW disposal sites to states and regional compacts, with siting authorities often employing socio-economic and political data to target communities that would give little resistance to their plans. The communities, however, were far from compliant, organizing nearly 1000 opposition events that ended up blocking the implementation of any new disposal sites. Sherman provides comprehensive coverage of this opposition, testing hypotheses regarding movement mobilization and opposition strategy by analyzing the frequency and disruptive qualities of activism. In the process, he bridges applied policy questions about hazardous waste disposal with broader questions about the dynamics of social movements and the intergovernmental politics of policy implementation. The issues raised in this book are sure to be renewed as interest grows in nuclear power and the disposal of the resulting waste remains uncertain.
