

1.	Record Nr.	UNISA990006044570203316
	Autore	TORRACA, Francesco
	Titolo	Il regno di Sicilia in Dante / F. Torraca
	Pubbl/distr/stampa	Benevento : Premiata ditta L. De Martini e figlio, 1904
	Descrizione fisica	31 p. ; 24 cm
	Disciplina	851.1
	Soggetti	Alighieri, Dante Opere Temi [:] Regno di Sicilia <1130-1815>
	Collocazione	XV.2.MISC. 237
	Lingua di pubblicazione	Italiano
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNINA9910962187503321
	Autore	Benassy Jean-Pascal
	Titolo	Money, interest, and policy : dynamic general equilibrium in a non-Ricardian world // Jean-Pascal Benassy
	Pubbl/distr/stampa	Cambridge, Mass., : MIT Press, c2007
	ISBN	9786612097003 9781282097001 1282097008 9780262268080 0262268086 9781429465533 1429465530
	Edizione	[1st ed.]
	Descrizione fisica	1 online resource (215 p.)
	Disciplina	339.5/3
	Soggetti	Money - Mathematical models Equilibrium (Economics) - Mathematical models
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia

Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. [189]-194) and index.
Nota di contenuto	Introduction; Part I - Ricardian and Non-Ricardian Economies; 1 - The Ricardian Issue and the Pigou Effect; 2 - Pigou Reconstructed: The Weil Model; Part II - Interest, Prices, and Money; 3 - Liquidity Effects; 4 - Interest Rate Rules and Price Determinacy; 5 - Global Determinacy; 6 - Fiscal Policy and Determinacy; Part III - Optimal Policy; 7 - A Simple Framework for Policy Analysis; 8 - Government Information and Policy Activism; 9 - Fiscal Policy and Optimal Interest Rate Rules; 10 - Inflation and Optimal Interest Rate Rules; Bibliography; Index
Sommario/riassunto	<p>An important recent advance in macroeconomics is the development of dynamic stochastic general equilibrium (DSGE) macromodels. The use of DSGE models to study monetary policy, however, has led to paradoxical and puzzling results on a number of central monetary issues including price determinacy and liquidity effects. In <i>Money, Interest, and Policy</i>, Jean-Pascal Benassy argues that moving from the standard DSGE models - which he calls "Ricardian" because they have the famous "Ricardian equivalence" property-to another, "non-Ricardian" model would resolve many of these issues. A Ricardian model represents a household as a homogeneous family of infinitely lived individuals, and Benassy demonstrates that a single modification-the assumption that new agents are born over time (which makes the model non-Ricardian)-can bridge the current gap between monetary intuitions and facts, on one hand, and rigorous modeling, on the other. After comparing Ricardian and non-Ricardian models, Benassy introduces a model that synthesizes the two approaches, incorporating both infinite lives and the birth of new agents. Using this model, he considers a number of issues in monetary policy, including liquidity effects, interest rate rules and price determinacy, global determinacy, the Taylor principle, and the fiscal theory of the price level. Finally, using a simple overlapping generations model, he analyzes optimal monetary and fiscal policies, with a special emphasis on optimal interest rate rules.</p>
