Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di contenuto	part I. Phenomenology -- part II. Clinical and therapeutic aspects -- part III. Dream research and theory.
Sommario/riassunto	""Drug dreams"", or the dreams in which drug-dependent patients use or attempt to use the drugs that they are addicted to, are a well-documented clinical phenomenon in various forms of drug addiction. Authors have highlighted their clinical, prognostic and therapeutic usefulness, since they provide information about the patients' ""drug craving"", their ability to cope with it, and their motivation to stay clean and sober. However, the study of drug dreams also reveals several implications and inspiration for general dream research and theory,

especially with respect to the recent neuropsychol
