Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (p. 290-316) and index.
Nota di contenuto	Front matter -- Contents -- Preface -- Acknowledgments -- Abbreviations -- 1. The Emergence Of Non-State Market-Driven Authority -- 2. The Research Design: Toward An Analytical And Explanatory Framework -- 3. British Columbia, Canada -- 4. The United States -- 5. The United Kingdom -- 6. Germany -- 7. Sweden -- 8. Competing For Legitimacy -- Appendix -- Notes -- Glossary Of Terms -- References -- Index
Sommario/riassunto	In recent years a startling policy innovation has emerged within global and domestic environmental governance: certification systems that promote socially responsible business practices by turning to the market, rather than the state, for rule-making authority. This book documents five cases in which the Forest Stewardship Council, a forest certification program backed by leading environmental groups, has competed with industry and landowner-sponsored certification systems for legitimacy. The authors compare the politics behind forest certification in five countries. They reflect on why there are differences regionally, discuss the impact the Forest Stewardship Council has had on other certification programs, and assess the ability of private forest certification to address global forest deterioration.

Sommario/riassunto	This engaging textbook highlights the essential need for a strong ethical framework in our approach to computer, information and engineering science. Through thought-provoking questions and case studies, the reader is challenged to consider the deeper implications arising from the use of today's rapidly-evolving computing

technologies and ever-changing communication ecosystems. This updated second edition features new material on information security, intellectual property rights, the Internet of Things, and 5G technologies. Topics and features: Introduces a philosophical framework and tools for understanding and analyzing computer ethics in personal, public, and professional spheres Describes the impact of computer technology on issues of security, privacy, anonymity, and civil liberties Examines intellectual property rights in the context of computing, including the risks and liabilities associated with software Discusses such key social issues in computing as the digital divide, employee monitoring in the workplace, and risks to physical and mental health Reviews the history of computer crime, and the threat of digitally facilitated bullying, harassment, and discrimination Considers the ethical challenges arising from online social networks, mobile telecommunications, virtual reality, the Internet of Things, and 5G technologies Includes learning objectives, discussion questions and exercises throughout the book This concise and accessible work addresses the critical ethical and moral issues important to all designers and users of computer technologies. The text incorporates the latest curricula requirements for undergraduate courses in computer science, and offers invaluable insights into the social impact and legal challenges posed by the latest generation of computing devices and networks. Dr. Joseph Migga Kizza is Professor and Associate Dean of the College of Engineering and Computer Science, and former Director of the Center for Information Security and Assurance, at the University of Tennessee at Chattanooga, USA. He is also the author of the successful Springer titles Ethical and Social Issues in the Information Age and Guide to Computer Network Security.
