

1. Record Nr.	UNISA990001005620203316
Autore	WEIL, Simone
Titolo	Cahiers, septembre 1941-février 1942 (6,2) / Simone Weil ; les textes de ce volume ont été établis et présentés par Alyette Degraçes...et al.
Pubbl/distr/stampa	Paris : Gallimard
Descrizione fisica	721 p ; 23 cm
Disciplina	120
Collocazione	II.1.D. 3621/6.2(II f A 1037/6,II)
Lingua di pubblicazione	Francese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Tit. della cop.: Cahiers
2. Record Nr.	UNINA9910725030503321
Titolo	AlpTransit in Ticino // AlpTransit Gotthard AG
Pubbl/distr/stampa	Bellinzona : , : AlpTransit Gotthard AG, , 2007
Descrizione fisica	1 online resource
Disciplina	624.19309
Soggetti	Tunnels - History Tunnels - Design and construction
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Periodico

3. Record Nr.	UNINA9910963438803321
Titolo	Radioactive contamination research developments // Nadine K. Henshaw and Cade S. Alleyne, editors
Pubbl/distr/stampa	New York, : Nova Science Publishers, c2010
ISBN	1-61122-566-3
Edizione	[1st ed.]
Descrizione fisica	1 online resource (308 p.)
Collana	Environmental remediation technologies, regulations and safety series
Altri autori (Persone)	HenshawNadine K AlleyneCade S
Disciplina	363.17/9907
Soggetti	Radioactive pollution Radioecology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Intro -- RADIOACTIVE CONTAMINATION RESEARCH DEVELOPMENTS -- RADIOACTIVE CONTAMINATION RESEARCH DEVELOPMENTS -- CONTENTS -- PREFACE -- Chapter 1PROGRESSES IN RADIOACTIVECONTAMINATION RESEARCHES -- Abstract -- 1. Introduction -- 2. Radiation and Radioactivity -- 2.1. Radiation -- 2.2. Background Radiation -- 2.3. Radioactivity -- 2.4. Radioactive Contamination and Radiation Exposure -- 3. Characteristics of Fundemental Radionuclides -- 3.1. Distribution of Radioactivity -- 3.1.1. Crystalline Rocks -- 3.1.2. Sedimentary Rocks -- 3.1.3. Organic-Rich Shales and Coal -- 3.1.4. Sandstones -- 3.1.5. Carbonates Rocks -- 3.1.6. Residual Soils -- 3.1.7. Phosphrites -- 4. Nuclear Test Fallout -- 5. Radioactive Contamination Researches -- 5.1. Sampling -- 5.2. Monitoring -- 5.3. Measurements -- 5.3.1. Counting Instruments -- 5.3.2. Internal Proportional Counters -- 5.3.3. End-Window Counters -- 5.3.4. Thin-Window Proportional Counter -- 5.3.5. Low-Background Beta Counter -- 5.3.6. Gamma Spectrometer -- 5.3.7. Alpha Spectrometer -- 5.3.8. Alpha Scintillation Counter -- 5.3.9. Liquid Beta Scintillation Counter -- 5.4. Assessment and Modeling -- 5.4.1. Spatial Modeling of Radioactive Contamination -- 5.4.1.1. Classical Variogram Methodologies -- 5.4.2. Point Cumulative Semivariogram (PCSV) Technique -- 5.4.3. Spatio-Temporal Point Cumulative Semivariogram (STPCSV) Technique -- 5.4.4. Multivariate Statistical Analysis of

Radioactive Contamination -- 5.4.4.1 Basic Statistical Analysis -- 5.4.4.2. Advanced Statistical Analysis -- Factor Analysis -- Cluster Analysis -- 5.4.5. Risk Assessment of Radioactive Contamination -- Risk Methodology -- 5.4.6. A New Concept for Radioactive Contamination Researches -- Perturbation Distribution Coefficient Definition -- Perturbation Method -- 5.4.7. Soft Computing For Radioactive Contamination Researches. Artificial Neural Networks (ANN) -- 5.4.8. Earthquake Prediction with Nuclear-Soft Computing -- References --

Chapter 2 BIOINDICATORS IN THE ASSESSMENT OF ATMOSPHERIC RADIOACTIVITY: CURRENT APPROACHES AND PERSPECTIVES -- Abstract -- 1. Introduction -- 2. Atmospheric Radioactivity and Its Impact on Biota -- 3. Assessment of Atmospheric Radioactivity Using Bioindicators -- 4. Estimating Radionuclide Transfer to Biota -- 4.1. Post-Chernobyl Studies -- 4.2. The Concept of a Reference Organism -- 4.3. Quantification of Radionuclide Transfer to Biota Using Reference Organisms -- 4.4. Models for the Assessment of Transfer to Non-human Biota -- 5. Mosses and Lichens as Biomonitors -- 5.1. Physiological Specificities -- 5.2. Ion Exchange Process -- 5.3. Interaction of $^{137}\text{Cs}^+$ with Organic Molecules -- 5.4. Entrapment of the Solubilized $^{137}\text{Cs}^+$ in a Crystalline Lattice -- 5.5. Intracellular Compartmentalization of $^{137}\text{Cs}^+$ -- Conclusion -- Acknowledgements -- References --

Chapter 3 VETOING TECHNIQUES IN RADIOACTIVE CONTAMINATION RESEARCH -- 1. Introduction -- 2. Public Exposure Limits and the Necessary Detection Sensitivity -- 3. Low-Level Gamma Spectroscopy -- 3.1. The Passive Shield -- 3.2. The Effects of Radon -- 3.3. Cosmic Rays -- 4. Basic Principles of Coincidence/Anticoincidence Counting -- 5. Coincidence Circuits -- 6. The Compton Suppressor Method -- 6.1. The NaI(Tl) Shielded HPGe Spectrometer Inside Passive Iron Shield (Department of Physics, University Of Novi Sad) -- 7. The Anti-muon Veto -- 7.1. The Actively Shielded Ge Spectrometer by a System of Plastic Veto Detector around a Passive Lead Shield (Department of Physics, University of Novi Sad) -- 7.2. Neutron Induced Gamma Lines -- 7.3. Changes in the Active Veto Shield in Order to Improve It -- 8. Analysis of the Actively Shielded Systems.

8.1. Commissariat A l'Energie Atomique, DRIF/DASE/RCE, Centre d'Etudes De Bruyeres-Le-Chatel, B.P. 12, 91680 Bruyeres-Le-Chatel, France [Po96]. -- 8.2. Laboratory of the Faculty of Physics, University of Seville [Hu06] -- 8.3. Laboratory of the University of Mokwon, Doandong Seo-Ku, Daejon 302-729, South Korea [By03] -- 8.4. Laboratory of Inorganic and Nuclear Chemistry, New York State Department of Health, Empire State Plaza, Albany, NY 12201-0509, USA [Se02] -- 8.5. IAEA-MEL (International Atomic Energy Agency, Marine Environment Laboratory), 4, Quai Antoine 1er, Monte-Carlo, MC 98000, Monaco [Po05] -- References --

Chapter 4 ESCAPING RADIOACTIVITY FROM COAL-FIRED POWER PLANTS -- Abstract -- 1. Introduction -- 2. Radioactivity of Coals and Fly Ashes -- 3. Particulate Dispersion of Fly Ash -- 4. Radioactivity Escaping from Coal-Fired Power Plants as Fine Particles -- 5. Hazards from the Radioactivity Escaping from the Stacks of Coal-Fired Power Plants -- 5.1. Hazards from the Escaping Fly Ash -- 5.2. Hazards from the Atmospheric Dispersion of Fly Ash -- 5.3. Hazards from Wall Radioactivity in Dwellings due to the Fly Ash -- 5.4. Hazards from Diffusion of Radon through Concrete -- 6. Conclusions -- References --

Chapter 5 PATTERN RECOGNITION METHODS IN ENVIRONMENTAL RADIOACTIVITY STUDIES -- Abstract -- 1. Introduction -- 2. Multivariate Analysis Methods -- 2.1. Artificial Neural Network with Back-Propagation Learning -- 2.2. Principal Component Analysis --

2.3. Linear Discriminant Analysis -- 2.4. K -Nearest Neighbour Algorithm -- 2.5. Soft Independent Modelling of Class Analogy -- 3. Recent Applications of Pattern Recognition Methods in Environmental Monitoring Studies -- 3.1. Optimization of Gamma-Ray Spectrometric Measurements -- 3.1.1. Optimization of Measuring Uncertainty -- 3.1.2. Optimization of Peak-to-Background Ratio. 3.1.3. Optimization of Minimum Detectable Activity -- 3.2. Classification of Samples in Environmental Studies -- 3.2.1. Classification of Soil Samples According to Their Geographic Origin Using Different Pattern Recognition Techniques -- 3.2.2. Implementation of Neural Networks for Classification of Moss and Lichen Samples on the Basis of Gamma-Ray Spectrometric Analysis -- Conclusion -- Acknowledgments -- References -- Chapter 6 ENVIRONMENTAL BEHAVIOUR OF URANIUM IN CLOSED MINING SITES -- Summary -- 1. Introduction -- 1.1. General -- 1.2. Scope -- 2. Abandoned Uranium Mining Site -- 2.1. Ore Mining and Processing -- 2.1.1. Ore Extraction -- 2.1.2. Uranium Processing -- 2.2. Characteristics of Abandoned Uranium Mines -- 2.2.1. Mining Wastes and Tailing -- 2.2.2. Mine Water Quality -- 2.2.3. Radon Gas Emanation and Air Quality -- 2.2.4. Acid Mine Drainage -- 2.2.5. Aquifer Contamination from In-Situ Leaching -- 3. Geochemistry -- 3.1. General Properties -- 3.1.1. Physicochemical -- 3.1.2. Radioactivity -- 3.1.3. Uranium Classifications -- 3.2. Aquatic Chemistry of Uranium -- 3.2.1. Behaviour in Surface Mine Waters -- 3.2.2. Uranium Behaviour in Oxidising Aquifers -- 3.2.3. Uranium Behaviour in Reducing Aquifer -- 3.2.3. Uranium in Waste-Rocks And Tailings Heaps -- 4. Ecotoxicology -- 4.1. Hazard Transfer from Abandoned Uranium Mines -- 4.2. Human Health Concerns -- 4.2.1. Exposure Routes -- 4.2.2. Chemical Toxicity -- 4.2.3. Radiological Toxicity -- 4.4. Ecotoxicological Approach -- 5. Uranium Bioremediation -- 5.1. Processes of Uranium Bioremediation -- 5.1.1. Biosorption -- 5.1.2. Bioprecipitation -- 5.1.3. Chelation -- 5.1.4. Active Intracellular Uptake -- 5.1.5. Biological-Induced Redox Reactions -- 5.1.6. Phytoremediation -- 5.1.7. Biogenic Facilitated Abiogenic Reduction of Uranium. 5.2. Applicable Bioremediation Strategies in Abandoned Uranium Mines -- 5.2.1. Constructed Wetlands -- 5.2.2. Injection Wells -- 5.2.3. Bioreactive Barrier -- 5.3. Challenges in Application of Bioremediation in AUM -- 5.3.1. Stoichiometry and Homeostasis Limits -- 5.3.2. Environmental Condition Limits -- 5.3.3. Discharge Pattern Limits -- 5.3.4. Ecological Implication Fears -- 5.3.5. Physicochemical Characteristics Limits -- 5.3.6. Processes and Counteraction Limits -- 5.5. New Perspectives: A Paradigm of the Eco-Remediation -- 6. Concluding Remarks -- Acknowledgments -- References -- Chapter 7 MODELLING RADIOACTIVITY DISPERSION IN COASTAL WATERS -- Abstract -- 1. Introduction -- 2. The Strait of Gibraltar-Alborán Sea Region -- 3. Rapid Response Radioactivity Dispersion Model for the Strait of Gibraltar -- 3.1. Hydrodynamics -- 3.2. Lagrangian Dispersion Model -- 3.3. Results and Discussion -- 3.3.1. Hydrodynamics -- 3.3.2. Dispersion Model -- 4. A Modelling Study on Radionuclide Dynamics in the Alborán Sea -- 4.1. Hydrodynamics -- 4.2. Sediment Transport -- 4.3. Radionuclide Dispersion in a 2-layered Sea -- 4.4. Computational Scheme -- 4.5. Results and Discussion -- 4.5.1. Hydrodynamics -- 4.5.2. Sedimentation -- 4.5.3. Radionuclide Dispersion -- 4.5.4. Sensitivity Tests -- 5. Conclusion -- References -- Chapter 8 NATURAL RADIOACTIVITY AND RADIOACTIVE CONTAMINATION IN SEA WATER --

Abstract -- Introduction -- Experimental -- Results -- Conclusion --

Sommario/riassunto

Radioactive contamination is the uncontrolled distribution of radioactive material in a given environment. Radioactive contamination is typically the result of a spill or accident during the production or use of a radionuclide. Contamination may occur from radioactive gases, liquids or particles. This book presents research on this topic.
