## Sommario/riassunto

City management in developing countries is a quickly growing area in  
 current public administration literature. However, little research  
 material can be found regarding the management of cities.  
 Demonstrating the issues in this field, Challenges in City Management:  
 A Case Study Approach brings the sometimes dry theories and  
 concepts of urban planning and management to life. The author uses  
 case studies to demonstrate "who," "what," "why," and "how,"  
 dramatically increasing readers' ability to comprehend and apply the  
 theories. Incorporating urban management and organizational  
 management theories with actual practice, the author presents case  
 studies based on observations made during her extensive experience.  
 She offers multiple examples of common contemporary city topics  
 ranging from personnel, policy-making, housing, homelessness,  
 transportation, and budgeting. Each study describes and analyzes a  
 scenario, identifying the economic and political factors as well as the  
 often conflicting players and interest groups. The book provides  
 enhanced understanding of the complex environment city  
 administrators work in, helping readers develop improved decision-  
 making and problem-solving skills through the study of real issues city  
 administrators have experienced. The case study methodology used  
 supplies information that is immediately applicable to real-world  
 situations, making it a resource that city administrators can use to  
 improve their public administration and governance skills.
