Sommario/riassunto	The book will highlight the role played by glial cells in the central and peripheral nervous systems in both healthy and unhealthy individuals. Among all processes involved, we will discuss the importance of the enteric nervous system in the control of gut homeostasis, in the interaction with the immune system, and its participation in pathological conditions such as metabolic syndrome. We will also look at the relevance of astrocytes during synaptic transmission and the regulation of plasticity by releasing gliotransmitters. Ultimately, we will highlight the influence of astrocytes during the development of a number of neurodegenerative diseases, such as multiple sclerosis and Alzheimer's disease, focusing on how the serum levels of the astrocytic protein S100B can be used as a biomarker for clinical decisions.

Sommario/riassunto	The project of constructing Asian irregular theology in East Asian perspective, based on life-word of Bamboo and social political reality of minjung, embraces Dr. Chung's cross-cultural existence as he develops his long-standing interest and expertise in Christian minjung theology in new ways with the image of bamboo as a symbol for the theological perspective of grass roots marginality. Using the ancient Chinese story "The Seven Sages of the Bamboo Grove," Dr. Chung engages with Christian eschatological discourse to support an aesthetical-utopian

theological ethics that is opposed to an ethics concerned with legitimation of a socio-economic status quo. In addition, Dr. Chung's develops his deep commitment to the Lutheran theology of the cross and the suffering Christ through the Buddhist concept of dukkha (suffering) to create, in the end, a genuinely East Asian contextual theology
