

1.	Record Nr.	UNINA9910994292703321
	Titolo	Fantasie e realtà del mangiar popolare napoletano / realizzato da Antonio Oliviero ; con i testi di Nello Oliviero ... [et al]
	Pubbl/distr/stampa	[S.l., : s.n.], stampa 1988 ((Napoli) : Irace print
	Descrizione fisica	[46] c. : ill. ; 30x32 cm
	Disciplina	394.12094573
	Locazione	FARBC
	Collocazione	SEZ.NA C 1679
	Lingua di pubblicazione	Italiano
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
2.	Record Nr.	UNINA9910965309103321
	Autore	Maclaurin James
	Titolo	What is biodiversity? / / James Maclaurin and Kim Sterelny
	Pubbl/distr/stampa	Chicago, : University of Chicago Press, 2008
	ISBN	9786611965884 9781281965882 128196588X 9780226500829 0226500829
	Edizione	[1st ed.]
	Descrizione fisica	1 online resource (231 p.)
	Classificazione	WI 2000
	Altri autori (Persone)	SterelnyKim
	Disciplina	333.95
	Soggetti	Biodiversity Ecology
	Lingua di pubblicazione	Inglese
	Formato	Materiale a stampa
	Livello bibliografico	Monografia
	Note generali	Description based upon print version of record.
	Nota di bibliografia	Includes bibliographical references (p. [186]-205) and index.
	Nota di contenuto	Frontmatter -- Contents -- Acknowledgments -- 1. Taxonomy Red in

Tooth and Claw -- 2. Species: A Modest Proposal -- 3. Disparity and Diversity -- 4. Morphology and Morphological Diversity -- 5. Development and Diversity -- 6. Explorations in Ecospace -- 7. Conservation Biology: The Measurement Problem -- 8. Conservation Biology: The Evaluation Problem -- 9. Concluding Remarks -- Notes -- References -- References

Sommario/riassunto

In the life sciences, there is wide-ranging debate about biodiversity. While nearly everyone is in favor of biodiversity and its conservation, methods for its assessment vary enormously. So what exactly is biodiversity? Most theoretical work on the subject assumes it has something to do with species richness-with the number of species in a particular region-but in reality, it is much more than that. Arguing that we cannot make rational decisions about what it is to be protected without knowing what biodiversity is, James Maclaurin and Kim Sterelny offer in *What Is Biodiversity?* a theoretical and conceptual exploration of the biological world and how diversity is valued. Here, Maclaurin and Sterelny explore not only the origins of the concept of biodiversity, but also how that concept has been shaped by ecology and more recently by conservation biology. They explain the different types of biodiversity important in evolutionary theory, developmental biology, ecology, morphology and taxonomy and conclude that biological heritage is rich in not just one biodiversity but many. Maclaurin and Sterelny also explore the case for the conservation of these biodiversities using option value theory, a tool borrowed from economics. An erudite, provocative, timely, and creative attempt to answer a fundamental question, *What Is Biodiversity?* will become a foundational text in the life sciences and studies thereof.
