

1. Record Nr.	UNINA9910966008503321
Titolo	Genome-based diagnostics : clarifying pathways to clinical use : workshop summary // Steve Olson and Adam C. Berger, rapporteurs ; Roundtable on Translating Genomic-Based Research for Health, Board on Health Policy, Institute of Medicine of the National Academies
Pubbl/distr/stampa	Washington, D.C., : National Academies Press, 2012
ISBN	0-309-25397-7 1-283-63629-8 0-309-25395-0
Edizione	[1st ed.]
Descrizione fisica	xx, 83 p. : ill. (some col.)
Altri autori (Persone)	OlsonSteve <1956-> BergerAdam C
Disciplina	616/.042
Soggetti	Human chromosome abnormalities - Diagnosis - United States Genetic disorders - Diagnosis - United States
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction -- Calls for Change -- Test Developers -- Patients -- Payers --Regulation, Reimbursement, and Public Health -- Discussion of Major Proposals -- References -- Appendix A: Workshop Agenda -- Appendix B: Speaker Biographical Sketches -- Appendix C: Statement of Task-- Appendix D: Registered Attendees.
Sommario/riassunto	"The sequencing of the human genome and the identification of associations between specific genetic variants and diseases have led to an explosion of genomic-based diagnostic tests. These tests have the potential to direct therapeutic interventions, predict risk or onset of disease, or detect residual disease. As research progresses and an increasing number of associations are found, further tests will be developed that can aid in providing personalized treatment options for patients. However, the adoption of genomic diagnostic tests by health care providers has been limited due to a lack of evidence regarding the clinical utility of many tests. Health funders and practitioners lack the data necessary to distinguish which tests can improve practice or the clinical settings in which tests will provide the greatest value. The

Roundtable on Translating Genomic-Based Research for Health held a workshop in November 2010 to determine what evidence is needed and how it is viewed by different stakeholders in order to develop genomic diagnostic tests of clinical value. *Genome-Based Diagnostics* summarizes the presentations and discussions that took place throughout the workshop. Two presentations, in particular, sparked extensive discussion. One presentation proposed that all genomic diagnostic tests be reviewed and approved by the Food and Drug Administration. The other observed that venture capitalists are no longer investing substantially in the development of genomic diagnostic tests because of a lack of clarity surrounding regulatory and reimbursement pathways. Both presentations suggested the need for major changes in the systems used to develop, regulate, and reimburse genomic diagnostic tests. The report also presents the perspectives of different stakeholders in the development of genomic diagnostic tests. Each stakeholder group has a different set of needs and issues of importance, yet commonalities among them are apparent, such as the need to put patients and health outcomes at the center of discussion and action"--Publisher's description.
