Sommario/riassunto	Cognitive linguistics is on its way to becoming a cognitive science, but a number of problems remain. The relationship between cognitive linguistics and the core cognitive sciences (psychology and neurology) must be clarified: cognitive linguists can selectively import models and methods from these disciplines as a foundation for their linguistic theories, they can export their own models to these disciplines for empirical testing and integration, or they can transform linguistics into a core cognitive science in its own right. The latter requires a number of changes to the models and practices of cognitive linguistics: it must refocus on its linguistic heritage, adopt a more scientific outlook, gain a higher degree of methodological awareness and restrict its models to

linguistic constructs and hypotheses that can be operationalized and falsified.
