Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	pt. 1. Aging in Asia : case studies -- pt. 2. Rethinking aging in Asia.
Sommario/riassunto	This book focuses on the implications of population aging in Asia. The book discusses the differences in the magnitude of the aged population in different parts of Asia and highlights the perennial concerns of care and support facing older people and their families as Asian societies grapple with the aging population. The array of chapters in this book substantiates these challenges and opportunities afforded to different countries in Asia in light of demographic shifts, which range from an examination of broad issues of support for the aged and policy directions in East and Southeast Asia, to specific concerns relating to older people in China, Hong Kong, Japan, Pakistan, Korea, Bangladesh and Nepal. Population aging across these countries are experiencing increased longevity and a declining birth rate, which is becoming more prevalent. The book explains how, due to changes in population structure, aging will alter trends in the decades ahead in Asia. This book is unique in that the research cited is not only rich on aging experiences across Asia but is an important process in bringing together evocative, engaged and comparative insights as to how we understand complex aging and welfare issues.
