

1. Record Nr.	UNINA9910966704103321
Autore	Woods W. David
Titolo	How Apollo flew to the Moon / / W. David Woods
Pubbl/distr/stampa	New York, : Springer Verlag Chichester, U.K., : Published in association with Praxis Pub., c2008
ISBN	9786611216665 9781281216663 1281216666 9780387740669 038774066X
Edizione	[1st ed. 2008.]
Descrizione fisica	1 online resource (452 p.)
Collana	Space Exploration
Disciplina	629.1
Soggetti	Space flight to the moon Space flight
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Apollo: an extraordinary adventure -- The Apollo flights: a brief history -- Launch: a fiery departure -- Earth orbit and TLI -- Retrieving the lander -- Navigating to the Moon -- Coasting to the Moon -- Entering lunar orbit: the LOI manoeuvre -- Preparations for landing -- Next stop: the Moon -- Orbital sojourn: looking at the Moon -- Rendezvous and docking -- Heading for home -- Re-entry -- Epilogue.
Sommario/riassunto	Out of the technological battlefield of World War II came a team of gifted German engineers and designers who developed the vengeance weapon, the V-2, which evolved into the peaceful, powerful Saturn V rocket to take men to the Moon. David Woods tells the exciting story, starting from America's post war astronautical research facilities, that used the V-2 for the development of the robust, resilient and reliable Saturn V launcher. He describes the initial launches through manned orbital spaceflights, comprehensively detailing each step, including computer configuration, the role of ground control, trajectory planning, lunar orbiting, separation of the lander, walking and working on the Moon, retrieval of the lunar astronauts and returning to Earth in this massive technical accomplishment.
