## Sommario/riassunto

This is a major contribution to our understanding of European integration. It analyzes for the first time, in a highly systematic fashion, European integration as transnational political society formation in a common political space. Four conceptual chapters discuss different approaches to studying European 'transnationalization' including networks and socialization. Six empirical chapters provide in-depth studies of different aspects of this process and policy fields ranging from European party networks and university collaboration to informal economic governance in the Eurozone.
