Edizione	[1st ed.]
Descrizione fisica	xix, 196 p
Altri autori (Persone)	LoBernard O'ConnellMary Ellen <1960->
Disciplina	363.5/0973
Soggetti	Housing and health - Research - Moral and ethical aspects - United States Children - Housing - Research - Moral and ethical aspects - United States Poor children - Housing - Research - Moral and ethical aspects - United States Children - Research - Moral and ethical aspects - United States Pediatrics - Research - Moral and ethical aspects - United States Human experimentation in medicine - Moral and ethical aspects - United States Social sciences - Research - Moral and ethical aspects - United States
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Housing and health -- Grimes v. Kennedy Krieger Institute: revisiting the ethical issues -- Characteristics of housing health hazards research -- Community involvement -- Parental permission, consent, and payment -- Researchers' responsibilities -- Research oversight.

Sommario/riassunto

Ethical Considerations for Research on Housing-Related Health Hazards Involving Children explores the ethical issues posed when conducting research designed to identify, understand, or ameliorate housing-related health hazards among children. Such research involves children as subjects and is conducted in the home and in communities. It is often conducted with children in low-income families given the disproportionate prevalence of housing-related conditions such as lead poisoning, asthma, and fatal injuries among these children. This book emphasizes five key elements to address the particular ethical concerns raised by these characteristics: involving the affected community in the research and responding to their concerns; ensuring that parents understand the essential elements of the research; adopting uniform federal guidelines for such research by all sponsors (Subpart D of 45 CFR 46); providing guidance on key terms in the regulations; and viewing research oversight as a system with important roles for researchers, IRBs and their research institutions, sponsors and regulators of research, and the community.
